

Anti-Wandering Solution

Affordable Anti-Wandering Monitors

Smart Caregiver, Inc., located in Petaluma, California offers a Wireless Anti Wandering System for under \$700.. The Smart Caregiver Smart Door Monitor is noteworthy because it is affordable to the average LTC facility and it operates with batteries or AC power, making it easy to install anywhere with just two screws. LTC facilities rely on this affordable anti-wandering system because it easily installs in minutes and provides residents with the comfort and security they deserve. Smart Door Monitor can also lock doors with the optional Magnetic Door Lock. Residents can get their rest because there are no alarms in the room and Care Givers can track multiple residents accurately and quickly from the same system.

The Smart Caregiver Advantage

LTC residents now have the benefit of an affordable anti-wander system that is easy to install and use. A tiny transmitter is concealed in a small comfortable wristband worn by the resident. The Smart Door Monitor is a digital display, relay and alarm. It also reports the identity of the wandering resident on its lighted display. When the resident approaches a monitored area or opens the door, the receiver displays their identity and sets off an alarm and/or flashing light. Because all residents are not created equal, the Smart Door Monitor tracks and identifies up to 99 residents quietly, safely and with no discomfort. Ease of installation, reliability, and affordability; that's the Smart Caregiver Advantage.

Success Story

Recently, the busy Forrest Manor LTC in Selma, Alabama discovered they were unable to keep up with the growing number of their wandering residents. Richard Rutherford, the facilities' Director says ³...you can't afford to post someone at every door, but we can put a Smart Door Monitor at our 13 rooms because they're affordable and they work great. The cost of monitoring 13 doors and over 30 residents with Smart Caregiver is less than a third of what others would charge. We've experienced no down-time because Smart Door Monitors have a battery back-up.²
